QRonster – Mockup Submission

Created by: Mahak Patel

Course: Workshops in Web Dev 2 - HTTP-5214-0NA

Task: Mockups Submission

Tool Used: Figma

Link to Figma Mockups: *Click Here*

🔍 Project Overview:

QRonster is a fun and sarcastic QR code generator that allows users to:

- Paste a URL

- Customize the style and colors

- Upload a logo

- Generate and download a styled QR code

- Receive a random roast message while waiting

🖼️ Mockups Included:

1. **Homepage UI**

   - Input field for URL

   - Color and style selectors

   - Logo upload option

   - "Generate QR" button

   - QR code preview

   - Roast message area

2. **Interaction – Roast Generator**

   ○ Roast message appears after QR is generated

   ○ Example roasts shown below QR area

   ○ Light visual effect (like fade-in or appear-on-load)

3. **Extra Concept: Fun Feature (Idea Phase)**

   ○ Concept sketch of a surprise or game feature (like a funny texting game)

   ○ Still deciding what works best with the front-end-only structure

---

🎨 **Animations & Interactions (Planned):**

● **Roast Message:** Will appear with a small animation with highlighting box

● **QR Preview:** Appears after the button is clicked

● **Buttons:** Basic hover effect, color shift

📝 **Notes:**

This mockup focuses on planning the key user screens and interactions. The actual coding will follow the same structure, using only HTML, CSS, and JavaScript, and the project will be hosted on GitHub Pages. No backend is used.
